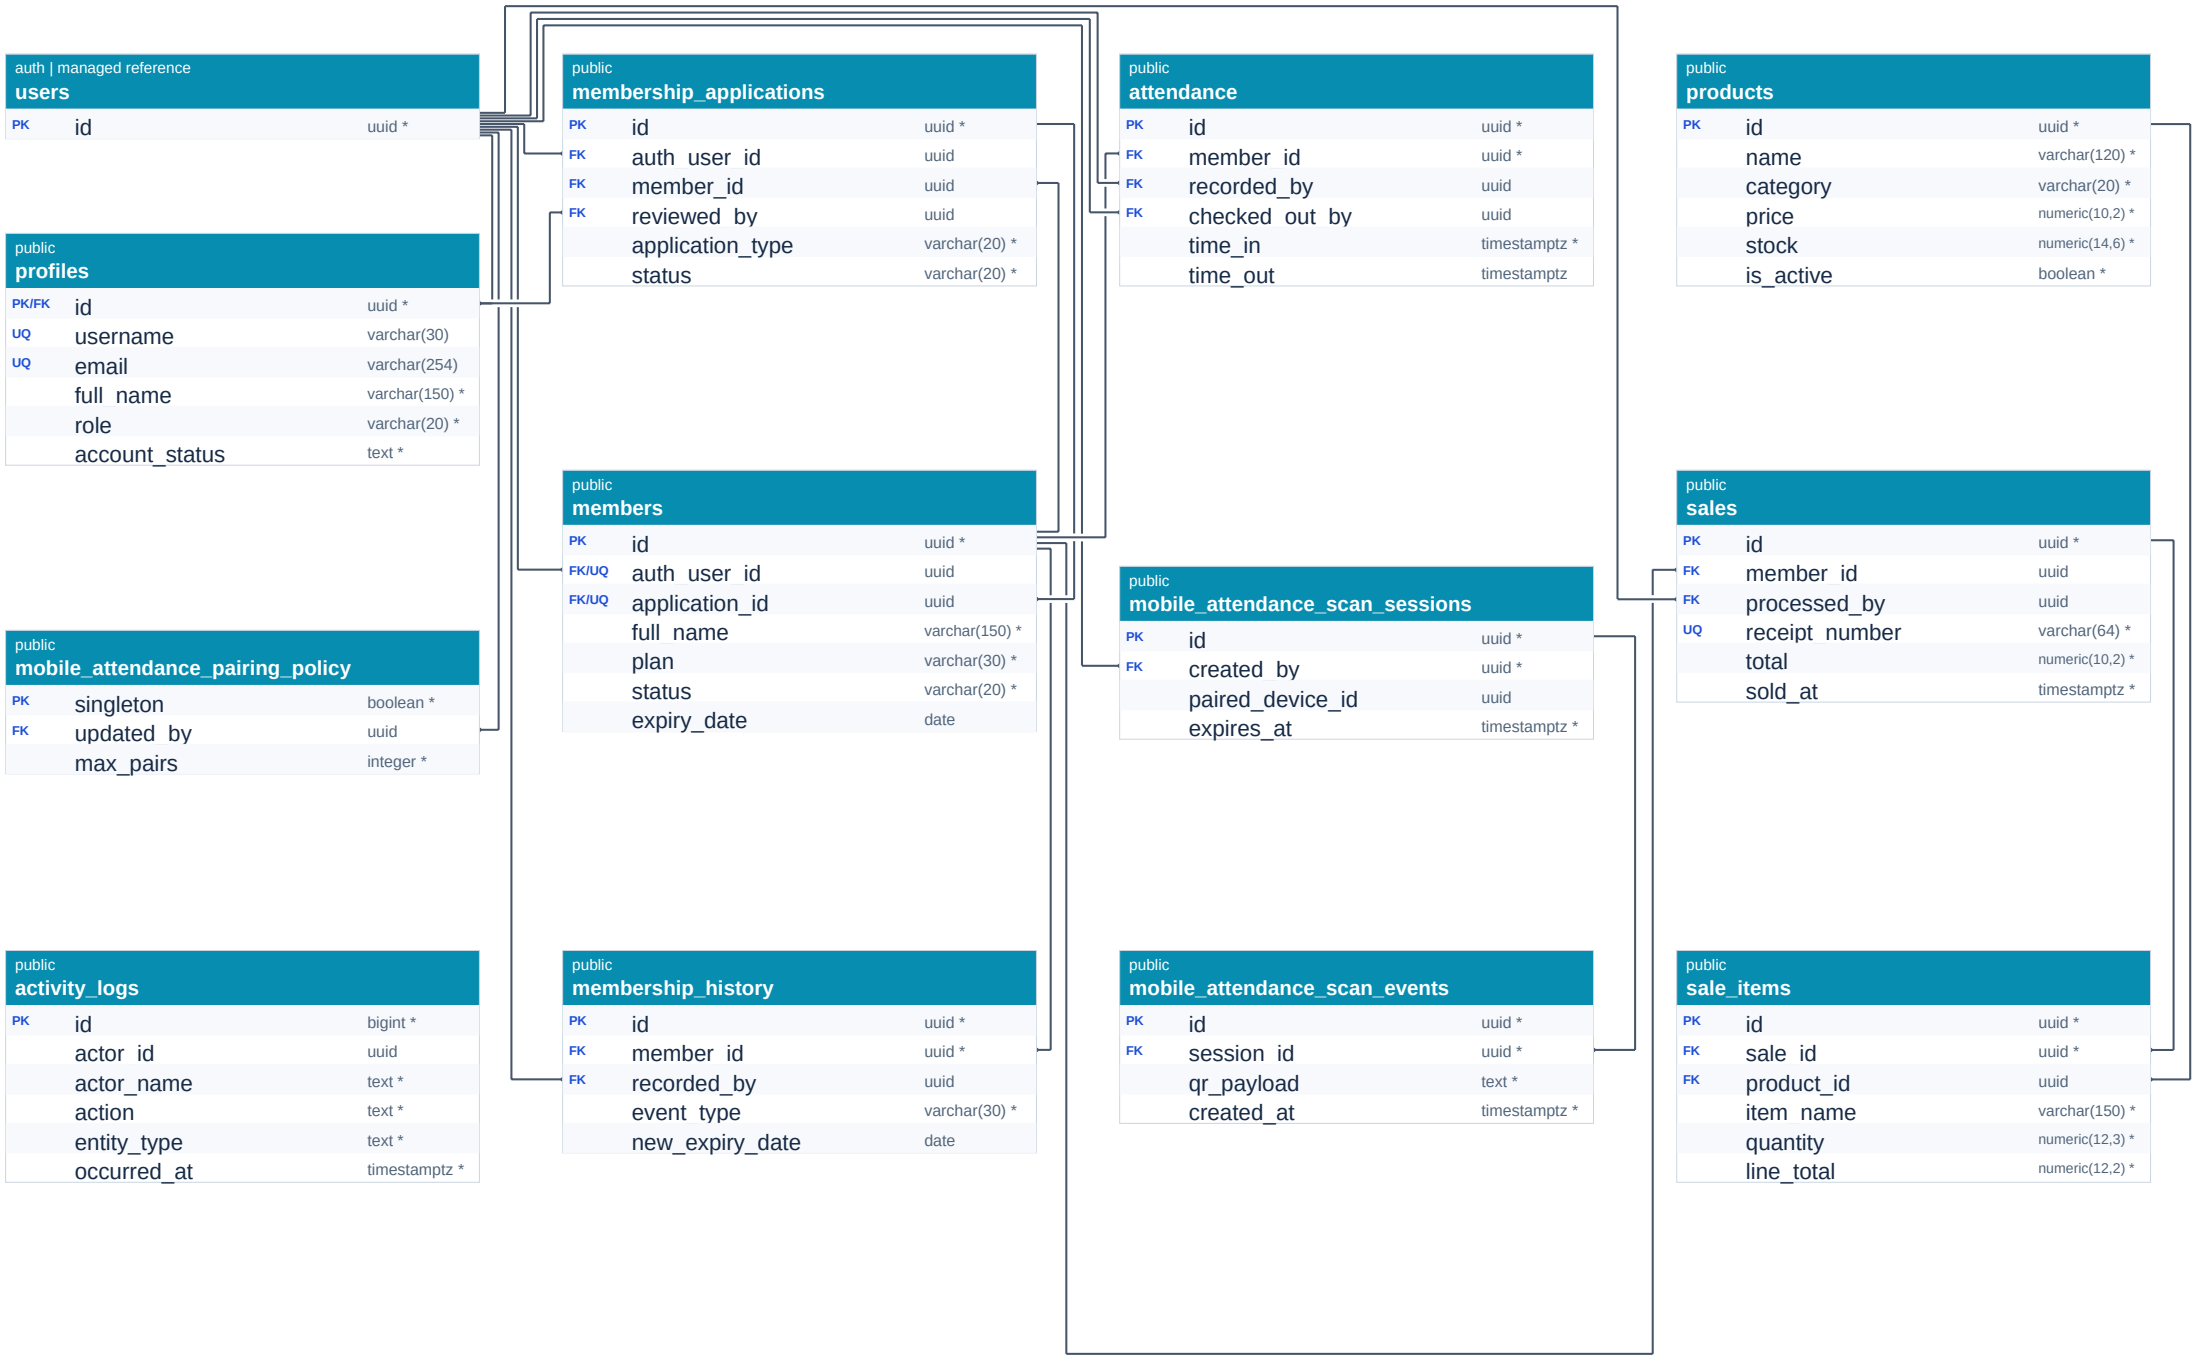
Figure 5. Public-Schema Entity Relationship Diagram

All 12 public tables and their declared foreign keys; selected attributes; auth.users shown as a reference.



PK = primary key FK = foreign key UQ = unique constraint/index * = NOT NULL. Lines connect referenced keys to foreign-key columns.

12 public tables + auth.users reference; 18 public foreign keys. All PK/FK columns are shown; other attributes are selected for readability.

All 162 public fields and the 3 private tables remain in the data dictionary. Gaps at crossings indicate separate links, not junctions.

Source: project pgAdmin schema export and checked migration baseline. Layout: A4 landscape, one page.
