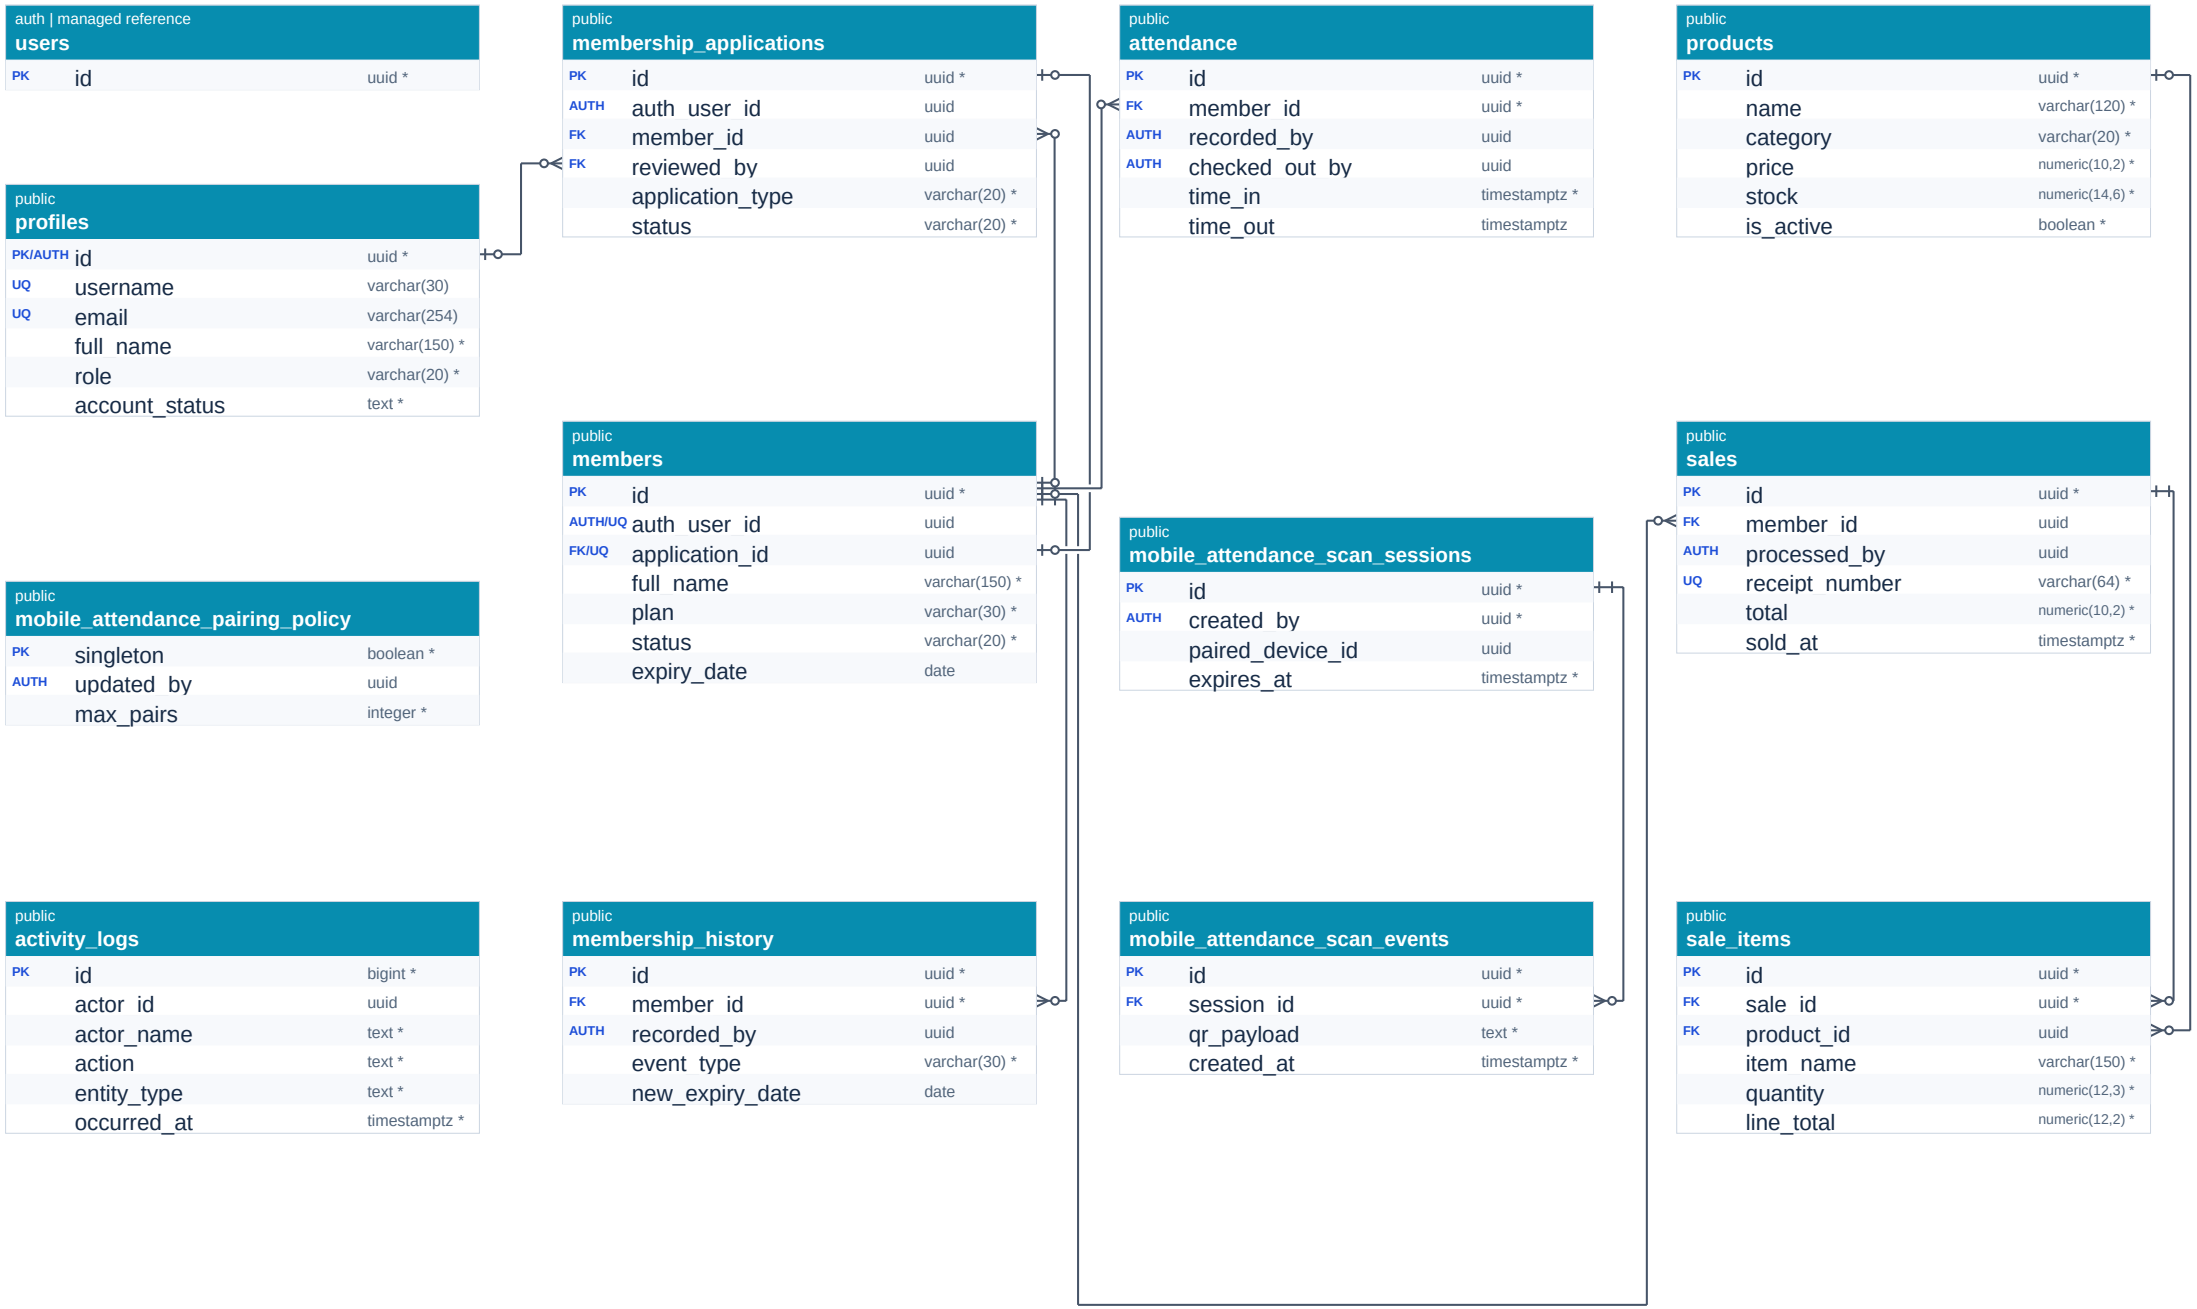
Figure 5. Public-Schema Entity Relationship Diagram

All 12 public tables and their declared foreign keys; selected attributes; auth.users shown as a reference.



PK = primary key FK = foreign key AUTH = FK to auth.users UQ = unique * = NOT NULL. Circle = zero; bar = one; fork = many.

12 public tables; 18 foreign keys: 9 drawn relationships and 9 AUTH references. All PK/FK fields are shown; other fields are selected.

All 162 public fields and the 3 private tables remain in the data dictionary. Gaps at crossings indicate separate links, not junctions.

Source: project pgAdmin schema export and checked migration baseline. Layout: A4 landscape, one page.
