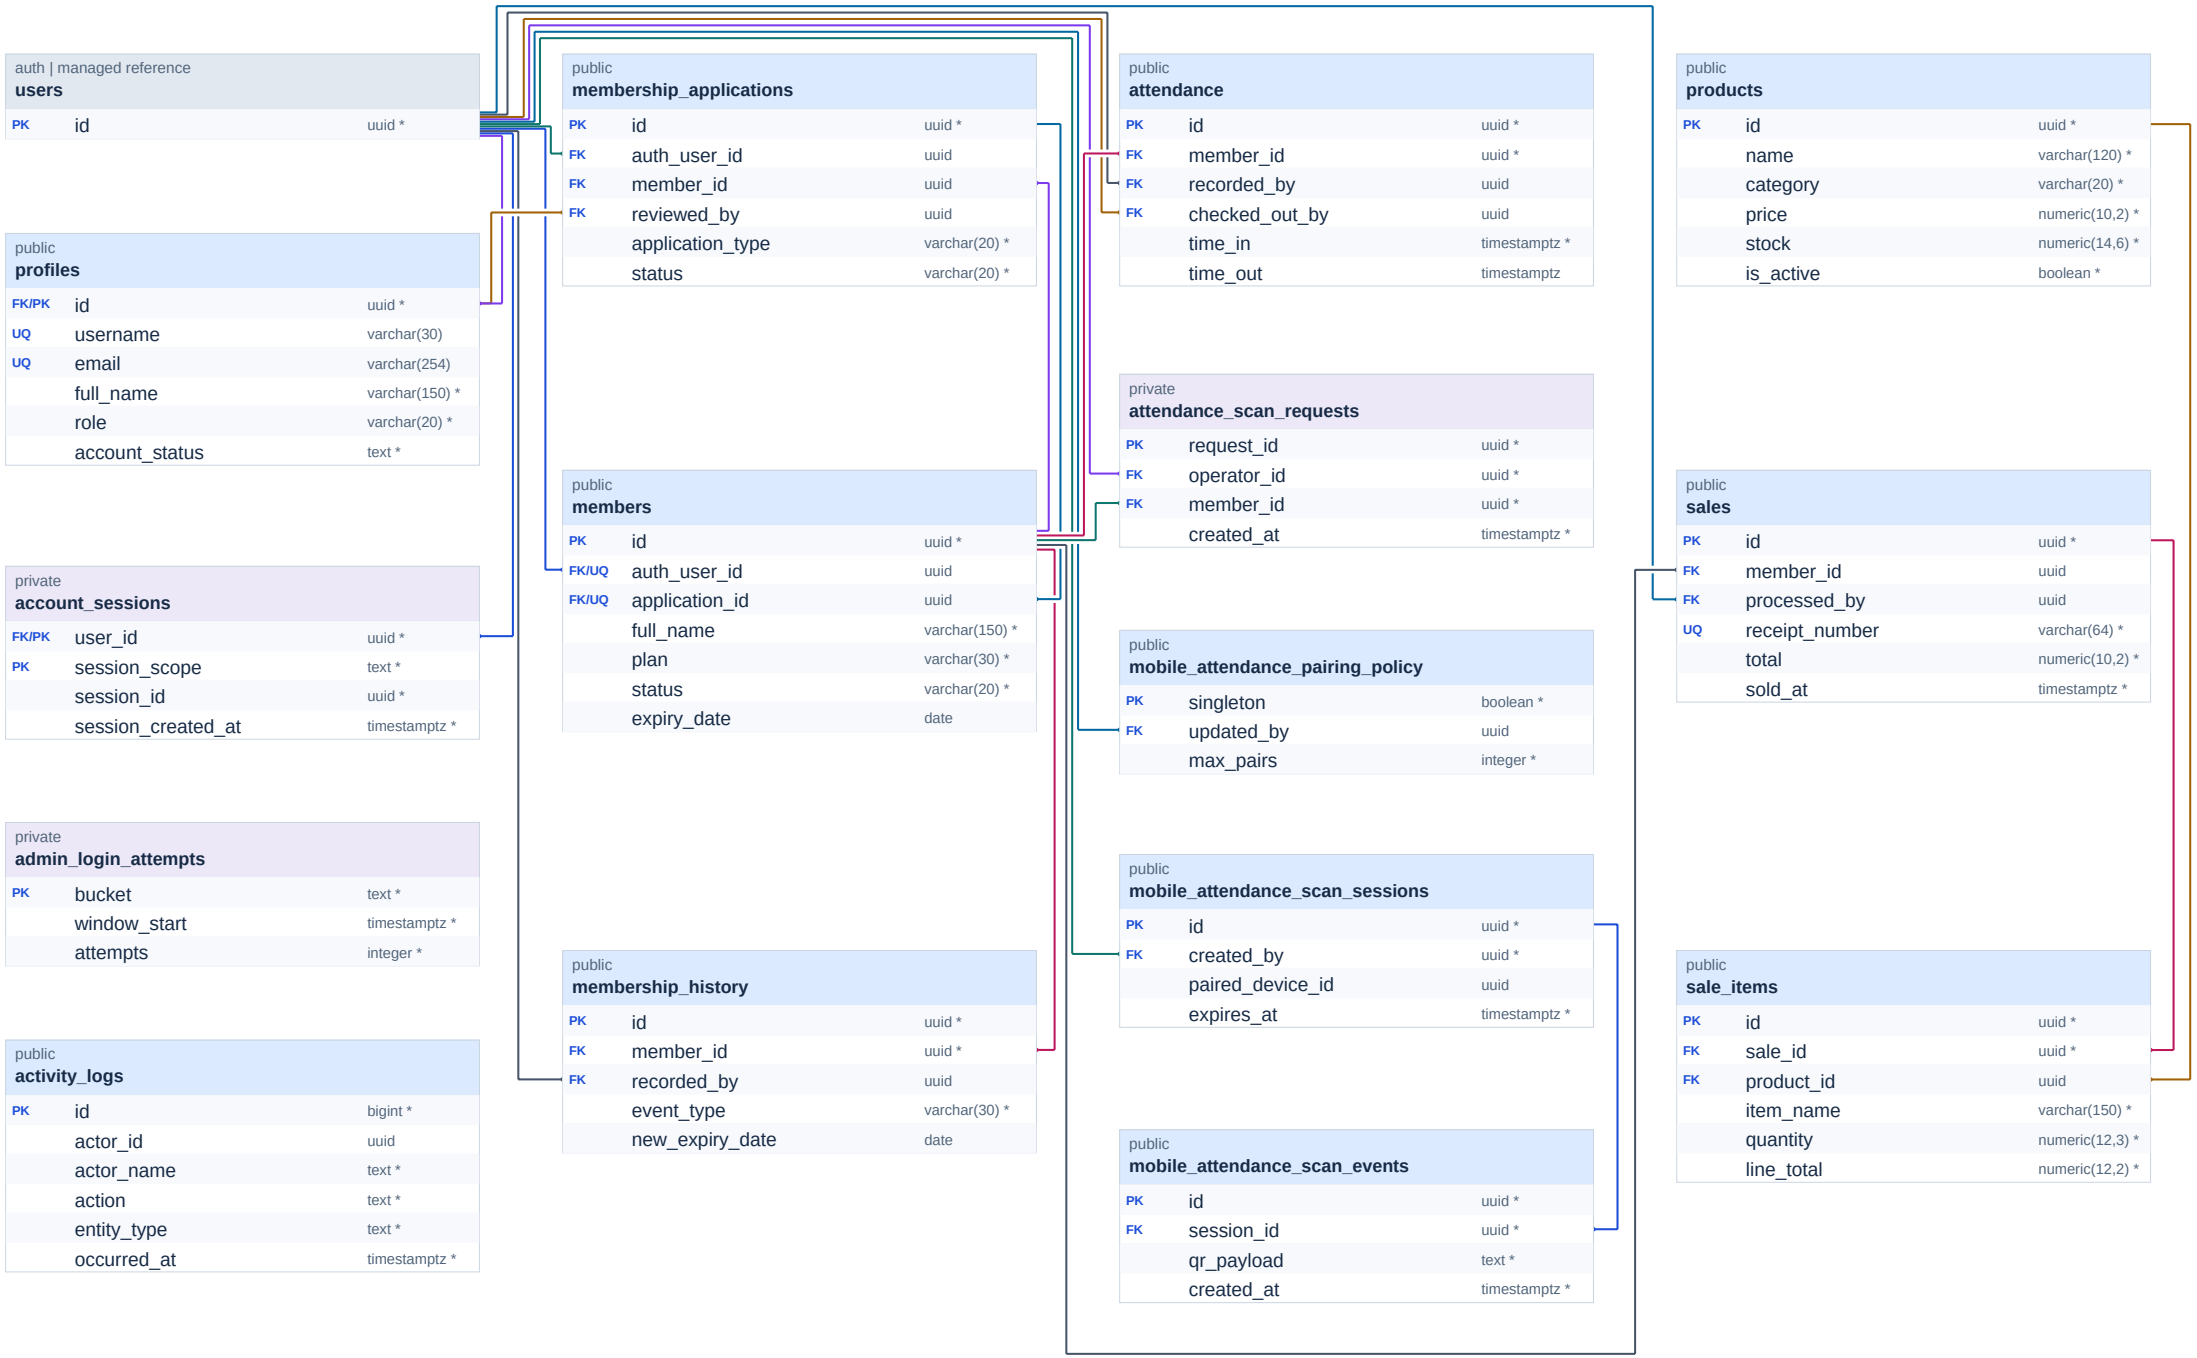
Figure 5. Physical database schema

One-page ERD overview: all application tables and declared foreign keys; selected attributes shown.



PK = primary key FK = foreign key UQ = unique constraint/index * = NOT NULL. Lines connect referenced keys to foreign-key columns.

15 application tables + auth.users reference; 21 declared foreign keys. All key columns are shown; other attributes are selected for readability.

Full 174-column definitions: see the data dictionary. Gaps at line crossings indicate separate relationships, not junctions.

Source: project pgAdmin schema export and checked migration baseline. Layout: A4 landscape, one page.
