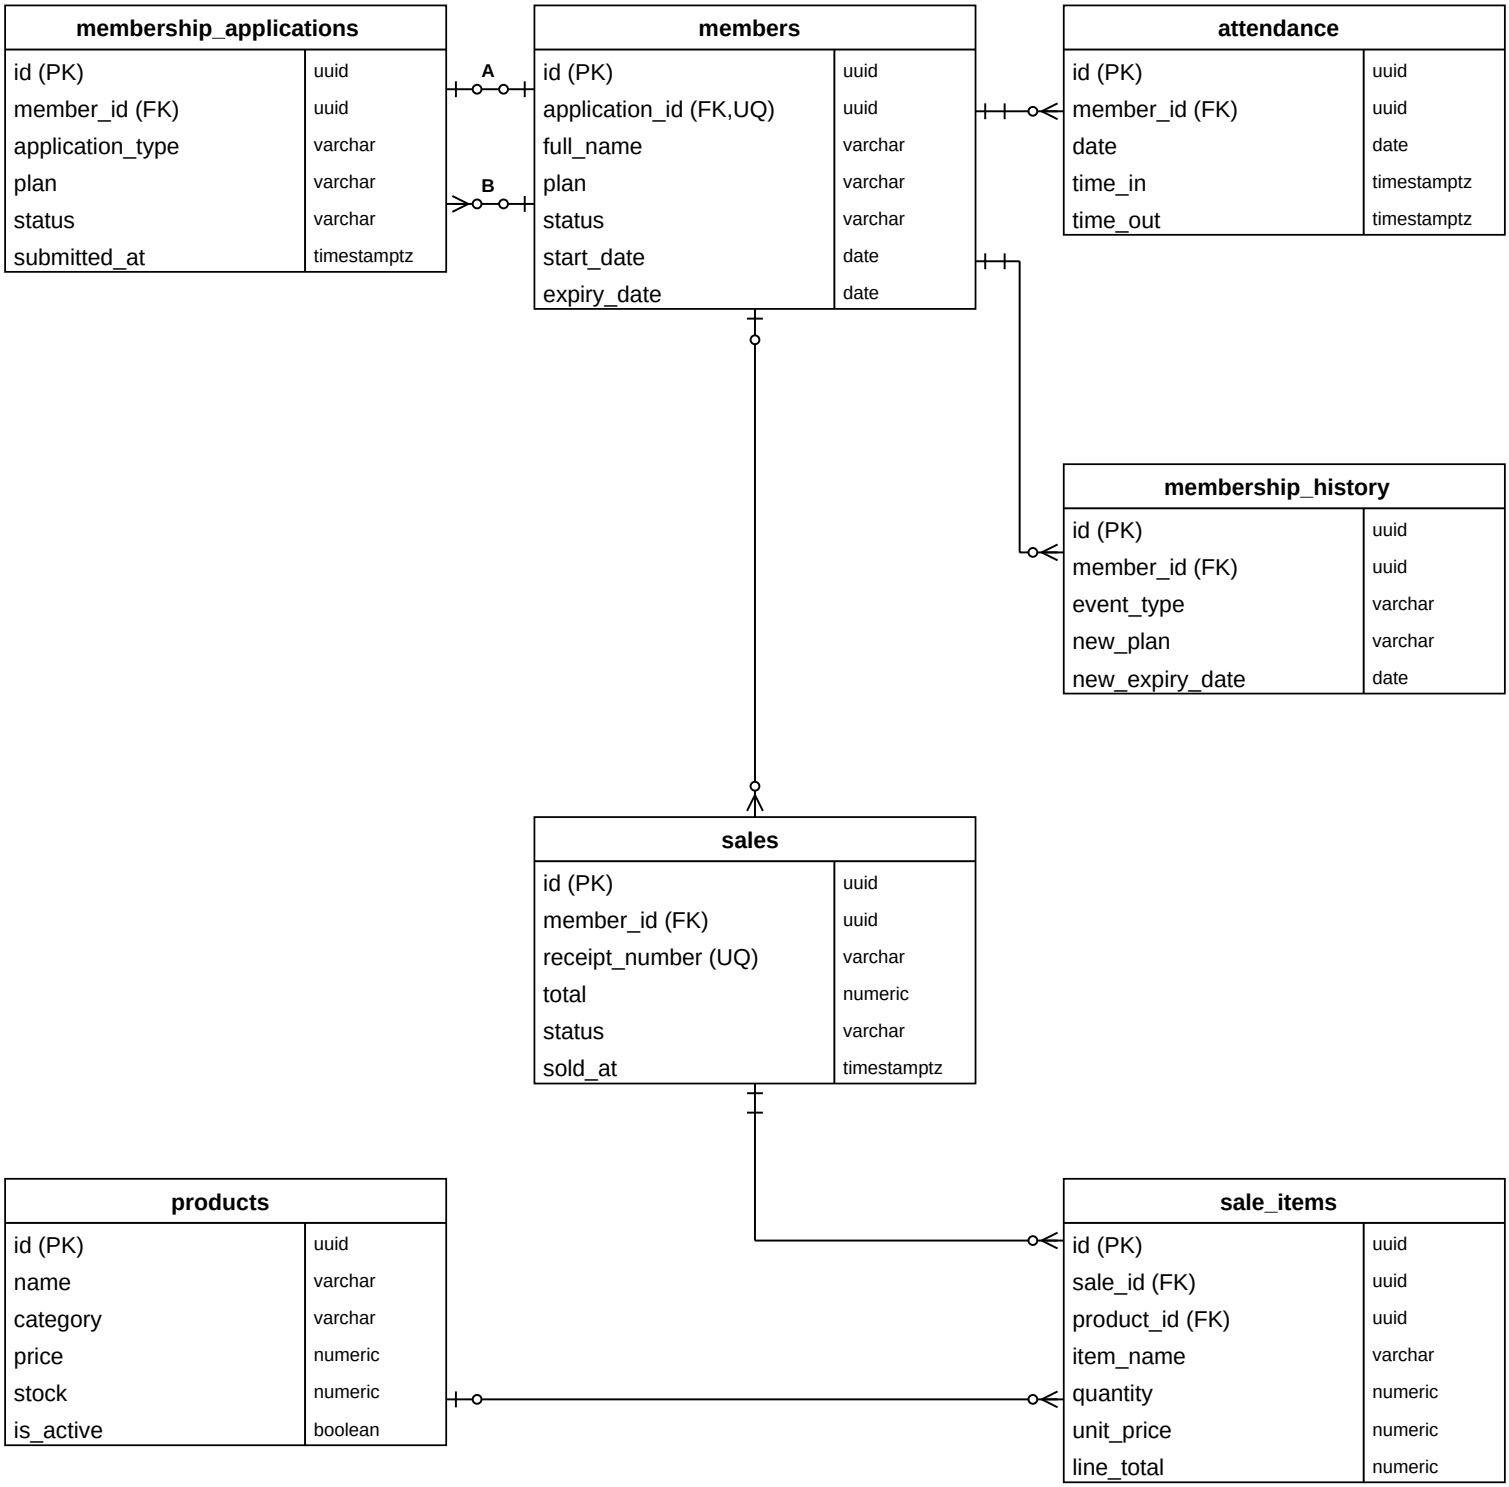
Figure 5. Core Business Entity Relationship Diagram

Selected attributes; all seven entities belong to the public schema.



A: members.application_id references membership_applications.id (optional unique link).

B: membership_applications.member_id references members.id (optional member; multiple requests).

Circles = optional; bars = one; crow's feet = many. PK = primary key; FK = foreign key; UQ = unique.

Core business relationships only. The data dictionary documents all 15 tables, 174 fields and 21 foreign keys.

Source: verified project database schema. Field types are abbreviated; full limits and constraints appear in the dictionary.
